

The current scientific beliefs about our reality, implies more dimensions of space than the three we already know “up-down”, “left-right”, “forward-backward” or for people used with physics notations that is (x,y,z) .

Understanding the implications of such a belief can be pretty hard to imagine for anyone which encounters this type of thinking for the first time.

I found those two clips on the net which allows anyone to get a “sneak peak” on what the “real” may actually be.

“Dr. Quantum” explaining “The flatland”

Or, if you prefer Carl Sagan, checkout this excellent presentation about “the fourth dimension”

If you think these “crazy” ideas are new you may be surprised to find out of that at about 1883 [Edwin Abbott](#) wrote ***Flatland: A Romance of Many Dimensions*** imagining a two dimension world...

This article is but first from a larger series on fundamental knowledge about the universe, which I hope it will lead to a new way to put together this “Lego” of already known ideas, in order to provide a (I hope) new way to explain reality and provide a bridge between various ways we all perceive it.
