

What would happen if you give a monkey a machine-gun?

Carl Sagan talking about the danger of marring more and more advanced technologies with very little or no understanding of the technology background by the masses.

Was he right? I think he was. Arthur Clarke observed that “Any sufficiently advanced technology is undistinguishable from magic”. Which means that for most of the people out there science and technology is magic, this allows religious fanatics to attack science by brainwashing the very people using the technology. And at the top of the magic hill are the computers... We have to take computers out of the magic by simplifying them and making them understandable by everyone, or the future may not be ours.
